config.yaml

SCENARIO

```yaml
event_p_zero_gravity:

  # ── SCENARIO DESCRIPTION ──────────────────────
  # Passed to every agent as the event name.
  # Agents generate 4 quantities from this +
  # the participant's intake answers:
  #   start_of_event          (~100-130 words)
  #   event_effects           (effects list)
  #   event_plot              (~50-word plot)
  #   event_plot_from_effects (~100-word plot)
  name: >
    Gravity has suddenly stopped working.
    Everything you normally do today — your
    routines, your commute, your meals — now
    happens in zero gravity. Walk through your
    day from the moment you wake up.

  # ── WHAT FEEDS THE AI AUTOCOMPLETER ──────────
  # Selects which generated quantity is passed
  # as event context to the completion LLM.
  #  "start"            → start_of_event
  #  "plot"             → event_plot
  #  "plot_from_effects" → event_plot_from_effects
  #  "effects"          → event_effects
  #  "none"             → no event context
  autocomplete_context: "plot_from_effects"

  # ── WHAT THE PARTICIPANT SEES ────────────────
  # Selects which quantity is shown above the
  # editor to set the scene. Can differ from
  # autocomplete_context — e.g. show participant
  # the opening sentence while feeding the LLM
  # the richer plot. Same options as above.
  shown_to_user: "start"
  shown_to_user_prefix: "Imagine this happens
    during your regular day"

  # ── EDITOR PLACEHOLDER ────────────────────────
  # Gray hint text shown before the participant
  # starts typing. Disappears on first keystroke.
  editor_placeholder: >
    You wake up and immediately something is
    different. Some ways to start: 'I woke up
    and reached to turn off my alarm clock.
    As soon as I touched it, I realized...
    [writing assistant will autocomplete]...'
```

INTAKE FORM

```yaml
  # ── INTAKE FORM ──────────────────────────────
  # Shown to participants before writing begins.
  # Answers are combined into a character
  # description and passed to every agent, so
  # AI-generated content feels personally relevant.
  additional_fields:

    weekday_morning_routine:
      # StringField: participant types freely
      type: "StringField"
      label: "Describe your typical
        weekday morning routine."

    living_floor:
      # SelectField: participant picks one option
      type: "SelectField"
      label: "What floor do you live on?"
      choices:
        - "Ground floor"
        - "2nd–5th floor"
        - "6th floor or higher"
        - "Single-family house"

    daily_commute:
      type: "SelectField"
      label: "How do you usually get
        to work or school?"
      choices:
        - "Walk"
        - "Drive a car"
        - "Take public transit"
        - "Bike"
        - "Work from home"

    primary_activity:
      type: "SelectField"
      label: "What does most of your
        workday look like?"
      choices:
        - "Sitting at a desk/computer"
        - "Standing and walking around"
        - "Physically active/outdoors"
        - "Mix of sitting and moving"
```
